## Employment

**Reddit** **Toronto, ON**
*Software Engineer III, Ads Privacy* *June 2025 – Present*

- Designed and led a real-time privacy-compliance initiative for Kafka-backed behavioral data, honoring first- and third-party opt-outs across three datasets serving targeting, measurement, and ranking teams. Scaled privacy-preserving processing to handle terabytes of data, supporting EU GDPR compliance and helping mitigate exposure to potential fines in the millions
- Led the privacy-logging component for the Age and Gender Beta, contributing to a launch associated with $75M in annual revenue. Owned the microservice, implemented role-based access control (RBAC), and built monitoring dashboards, alerts, and on-call documentation in partnership with Reporting and Forecasting
- Conducted 50+ technical interviews and mentored junior engineers through code reviews, pair programming, and 1:1s; improved developer productivity through internal tooling and LLM-assisted engineering practices

**Reddit** **Toronto, ON**
*Software Engineer II to III, Ads Targeting* *2022 – May 2025*

- Owned A/B experiments, infrastructure migrations, and full-stack Beta/GA rollouts for audience-targeting products, including community, interest, pixel, device, and geolocation (city). Work spanned from the campaign-management UI, public APIs, data pipelines, targeting data reader/writer, and ad-server shard matching
- Served as a subject matter expert (SME) on community, interest, and gender targeting, notable results include the Interest Targeting V2 GA and Contextual Gender Targeting which generated $10M+ in new ad revenue
- Led the cross-functional Digital Services Act (DSA) Transparency Refactor across web and mobile consumer surfaces and the ad-serving funnel for all targeting products. Added comprehensive documentation and SLO/SLA coverage, reducing rollout engineering time from ∼1 week to ∼1 day
- Managed Sev1/2 incident response and resolution with engineering teams and stakeholders; completed post-mortems and root-cause analyses within one week. Created runbooks and tuned alerts to reduce on-call noise

js

**TripAdvisor** **Remote**
*Software Engineer II, Ads Experience* *2020 – 2022*

- Led high-impact features and large-scale refactors across ad surfaces, including the Layout Shift project that introduced backfill ads. Boosted impressions, CTR, and revenue while enabling B2C monetization through redirected traffic
- Planned and executed the monthly rollout of Travelers' Choice, a consumer product surfacing top-rated businesses. Delivered end-to-end changes across frontend, backend, and database layers with robust support for human + SQL-driven rankings

## Education

**University of Toronto** **2015 – 2020**
*Bachelors of Science, Computer Science and Statistics*

- Teaching Assistant for Algorithm Design and Data Structures courses

## Achievements / Hobbies

- Student Coach, ICPC team placing 21st of 130 teams against top universities
- Beginner-level acoustic and electric guitar player; may play a fun song at team outings

## Technical Skills

**Core Technologies:** Golang, Scala, Python, React, Terraform, Kubernetes, Kafka, BigQuery, Thrift, gRPC
**Additional Technologies:** Cassandra, PostgreSQL, Vim, Claude, Cursor, CI/CD
